General Electric contributions cited

The second largest employer in Virginia, General Electric has in Lynchburg its international headquarters for the company's mobile land-based communications systems.

Those who use General Electric communications systems range from small businessmen such as ready-mix concrete contractors, to massive organizations such as the Virginia State Police and the Los Angeles Rapid Transit.

About 25 percent of the customers served by the Lynchburg General Electric complex are international. Saudi Arabia is one of the company's larger customers.

In Lynchburg, there are three main manufacturing facilities, at Bradley Park, Waterlick Road, and on Candler's Mountain Road.

The largest of these facilities, the Candler's Mountain Road plant, is a huge complex with several buildings, the largest of which covers 650,000 square feet.

General Electric also has several office and sales locations in the city of Lynchburg.

More than 3,000 people are employed by General Electric in the Lynchburg area.

One of the more impressive aspects of General Electric is the scope of its operations. From light bulbs to nuclear reactors, General Electric is involved in energy technology research and development, much of it advanced.

The Lynchburg facilities, which employ many persons in Appomattox County, have been in operation for 26 years. "We've experienced good growth," according to Robert Gosser, G.E. spokesman.

He notes that General Electric's communications headquarters was originally located in Syracuse, N.Y. The mobile land-based communications division of General Electric includes an assembly and components plant in Florence, S.C., according to Gosser.

Last year, General Electric totaled more than $300 million in mobile radio unit sales, according to Gosser.

Along with the contribution General Electric makes to the economy of this portion of Virginia, the company supports the Junior Achievement program and is a heavy contributor to the United Way charity benefit program.

There are auditorium

Mobile communications...a key to greater productivity....

For years General Electric two-way radio users have been eliminating as much as 25% of their mileage and saving a proportionate amount of fuel and vehicle costs....The result: Greater productivity with three vehicles doing the work of four.

The world headquarters of GE's mobile communications business is Lynchburg, Virginia. Shown above are some of the products made by 02 employees--your friends and neighbors--in the Lynchburg area.

At GE--in Lynchburg, Virginia--we bring good things to life.
